

## Flight Tax Systems offers new data import feature

Aviation tax software, Flight Tax Systems (FTS), is now offering a data import feature which will provide users of the software with increased functionality and efficiency.

The data import feature allows pertinent flight data to be imported into the software from a schedulers' software download or Excel spreadsheet. Flight information is mapped through a quick and easy import process, as well as step by step instructions are provided to ease users through the process.

This feature is a valued benefit to FTS users, as it saves entry time from having to key in certain data manually. It also assists in reducing errors from manually entered data. Response from FTS users regarding the data import feature has been very positive as it serves as a valuable time saving tool for them.

FTS is a user-friendly software application designed for aircraft owners and operators to track the tax-related activities of their aircraft. Flight Tax Systems, LLC is a division of Wolcott & Associates, P.A., an aviation dedicated group of CPAs and professionals helping clients to identify, protect and preserve tax deductions for their aircraft.
